

FOR FOLIAR AND FERTIGATION APPLICATION

Refined biostimulant with high level of amino acids

APPLICATION RATES

Notes: Tank mix at 16°C water temperature (or above) to ensure product flows freely through your tank filter.

Can be applied by itself or mixed with other soluble fertiliser applications.

Avoid applying in slow drying conditions, excessive heat, in combination or in close proximity to copper fungicides, or other mineral products such as Manganese Sulphate or Zinc Sulphate, and on crops at risk of fruit marking such as kiwifruit or apples when fruit is present. NZBioAmino™ may enhance up-take of these materials and increase the risk of fruit marking.

APPLICATION	DILUTION	PER APPLICATION	RECOMMENDED FREQUENCY
FOLIAR & SOIL			
General Agriculture	1:100	4–5L/Ha	Apply 2–3 times during vegetative growth, with 3–4 week intervals

Indicated dosages and application stages are given as a guideline. Exact dosages, concentration rates and application stages are subject to local conditions, use of other fertilisers and can only be given after an objective diagnosis.
